Saturday, October 5 7pm

Home of Christina Russell '96
Glover Park
Washington, DC

Christina Russell '96 and Charles Hokanson '93 will be co-hosting our fall Stanford Potluck Dinner at Christina's apartment in Glover Park. This series of fun, casual dinners have been very successful because of the great mix of "young" and "seasoned" Stanford alums, hosted at alums' homes, who have brought delicious food to share and who come interested in meeting others in their field of interest.

If you are a Stanford grad in the education field (teaching, policy, advocacy, etc.) and would like to attend or would like additional details, please contact Tom Kohn, '83 (kohntom@gmail.com) or Mark Kogan, '09 (markskogan@gmail.com). Participation is limited, so please RSVP soon to ensure your participation.

No pressure. No business cards. Great food and drink. Interesting people. Join us!

Coed Basketball

- The Washington DC Stanford Association is looking to see if anyone is interested in playing on a co-ed basketball team. Our opponents will be the Washington, DC Alumni Clubs of colleges and universities that are members of the Capital Alumni Network (CAN). The season would run from early January to late March. Last year the games were held Monday through Fridays at 7:15 pm, 8:15 pm, or 9:15pm. If you are interested in playing and/or coaching, please contact Gregory Billings via email at billings.g@gmail.com no later than Sunday, November 3.

Stanford In the News

- In an advance that could dramatically shrink particle accelerators for science and medicine, researchers used a laser to accelerate electrons at a rate 10 times higher than conventional technology in a nanostructured glass chip smaller than a grain of rice. The achievement was reported today in the journal Nature by a team including scientists from the U.S. Department of Energy's SLAC National Accelerator Laboratory and Stanford University.
- A team of Stanford engineers has built a basic computer using carbon nanotubes, a semiconductor material that has the potential to launch a new generation of electronic devices that run faster, while using less energy, than those made from silicon chips. This unprecedented feat culminates years of efforts by scientists around the world to harness this promising but quirky material.
